I just installed Biztalk Server 2006 R2 Developer Edition and Visual Studio 2005 on a Windows 2008 server. I not installed them in the default location, but on other harddisk.

Now, the Biztalk Project template is not available in Visual Studio. Also, when I try to load a solution containing BizTalk projects, I get

The application for project 'C:\Projects\MyBiztalkProject.btproj' is not installed.

Make sure the application for the project type (.btproj) is installed.

How do I make the Biztalk Project template available in Visual Studio?

Greets,
Nils Gruson
